

# **“Economic background of gas problems within Russia-EU-Ukraine triangle and possibilities for mutually acceptable compromise”**

**Prof. Dr. Andrey A.Konoplyanik,  
Advisor to the Director General, Gazprom export LLC,  
Professor, Chair “International Oil & Gas Business”,  
Russian State Gubkin Oil & Gas University,  
Co-chair, Work Stream 2 “Internal market”, Russia-EU Gas Advisory Council /  
Informal Russia-EU Expert Consultations on Third EU Energy Package issues  
[www.konoplyanik.ru](http://www.konoplyanik.ru)**

**Invited Speaker’s “Thursday Lecture” at the Center for Energy, Petroleum, Mineral Law & Policy (CEPMLP), University of Dundee, 30 October 2014, Dundee, Scotland, UK**

# Table of contents

- 1) **New post-2009 gas world & its material & perceived realities in Broader Energy Europe**
- 2) EU's respond to new realities: diversification (importer's angle)
  - a. NWE vs CEE: two different EUs in preparedness for diversification (density of infrastructure)
  - b. From Groningen model LTGEC to Third EU Energy Package in gas (new institutional structure of supplies)
  - c. Hubs development in the EU & in the world (how liquid are EU hubs)
  - d. EU Gas Target Model: "pluralism of supplies" requires financeable rules for investments
- 3) Ukraine's respond to new realities: diversification (transit state angle)
  - a. Russia-Ukraine supply contract: price & payment issue
  - b. Reverse flows issue
- 4) Russia's respond to new realities: diversification (exporter's angle)
  - a. Adaptation within new EU gas market architecture (new flexibility)
  - b. Diversity of pipelines routes
  - c. New pipelines by-passing UA vs modernization of UA GTS: comparative economics in project financing world

# New post-2009 gas world & its European dimension within Broader Energy Europe

## 1) Oversupply due to:

### a) **Demand-side** => market niche for gas narrowed in EU:

- i. overall decline = (i) economic crisis + (ii) energy efficiency
- ii. gas substitution = (i) subsidized RES vs (oil-indexed) gas + (ii) cheap US imported coal (*US shale gas domino effect #2*) vs (oil-indexed) gas

### b) **Supply-side** => competition within this narrowed market niche for gas in EU increases:

- i. Qatari LNG (*"garbage gas"*) to EU prior to Fukushima (*US shale gas domino effect #1*)

## 2) **Institutional** => 3rd EU Energy Package => concurrent with EU oversupply situation which triggered liberalization (upside-down gas reforms)

## 3) **Political** => RF-UA gas transit crises => consequences for EU/Ukraine/Russia & whole Broader Energy Europe

# Russia-EU-Ukraine's new circumstances: 22 days vs. 40+ years => RF-UA vs RF-EU

- Ukraine as integral element of Russia-EU gas supply chain =>
- “Matrix effects” & “Domino effects” of Russia-UA Jan'06/09 gas crises for Russia-EU gas relations/supply chain:
  - 22 days of interruptions of Russian gas supplies to the EU via Ukraine = 3 days in Jan'2006 + 19 days in Jan'2009:
  - has overbalanced previous 40+ years (since 1968) of stable & non-interruptible supplies =>
  - has changed *perceptions* within **all three parties** on stability & non-interruptible character of future gas supply through this chain => each party has its own vision & answers & lines of actions
- New perceptions as starting points for objective “domino effects”:
  - political statements & decisions => legal documents => investment decisions aimed at new *perceived* equilibrium to be reached
  - when investments are made, ‘no return’ points are passed through
- **“No return” points for each party** => What are they? Whether they are reached/ passed through already by each party?

# EU-Ukraine-Russia: in search for new post-2009 equilibrium with different aims & responds & lines of actions

- **EU:** *to diminish dominant role of Russia as major gas supplier*
- **Ukraine:** *to escape monopoly of Russia as one single gas supplier*
- **Russia:** *to escape monopoly of Ukraine as one dominant gas transit route*
- The aims seems to be totally different (are they?) => to find new equilibrium within multidirectional individually enforced changes
- Technical, economic, legal, political dimensions...
- Narrowing corridor for new equilibrium – but it is still there (technical, economic, legal) => though (political) “a long & winding road” (*The Beatles*) to new compromise... - if a goodwill is there - “...but not yet” (*Gladiator/Ridley Scott*)

# Table of contents

- 1) New post-2009 gas world & its material & perceived realities in Broader Energy Europe
- 2) EU's respond to new realities: diversification (importer's angle)**
  - a. NWE vs CEE: two different EUs in preparedness for diversification (density of infrastructure)
  - b. From Groningen model LTGEC to Third EU Energy Package in gas (new institutional structure of supplies)
  - c. Hubs development in the EU & in the world (how liquid are EU hubs)
  - d. EU Gas Target Model: "pluralism of supplies" requires financeable rules for investments
- 3) Ukraine's respond to new realities: diversification (transit state angle)
  - a. Russia-Ukraine supply contract: price & payment issue
  - b. Reverse flows issue
- 4) Russia's respond to new realities: diversification (exporter's angle)
  - a. Adaptation within new EU gas market architecture (new flexibility)
  - b. Diversity of pipelines routes
  - c. New pipelines by-passing UA vs modernization of UA GTS: comparative economics in project financing world

# New risks, new challenges, new responds, “no return” points: the EU (1)

- Perception: *as if* non-reliable future supplies from Russia via Ukraine to EU
- Responds: organization of new internal EU gas market architecture with **multiple supplies** & (high) **flexibility**
- **Multiple supplies (diminish dominant role of Russia as major supplier):**
  - **Alternatives to Russian gas (supply side):** SOS Directive => Reg.994/2010 (3+ gas supply sources/MS, ‘N-1’ rule, etc.), LNG, shale gas, UGS
  - **Alternatives to (Russian) gas (demand side):** climate change => decarbonization => RES, energy efficiency => shrinking gas share in fuel mix => the loser would be a less competitive gas supplier
    - General perception in EU: this will be most distant & costly in production & oil-indexed-priced Russian gas
- **BUT** (in: “Reducing European Dependence on Russian Gas: distinguishing natural gas security from geopolitics,” (ed.) J.Stern, OIES, October 2014):
  - **“The main finding of this paper is that there is limited scope for significantly reducing overall European dependence on Russian gas before the mid-2020s. ...**
  - **Russian gas deliveries to Europe will be highly competitive with all other pipeline gas and LNG (including US LNG) supplies throughout the period to 2030, and Gazprom’s market power to impact European hub prices may be considerable. ”**

# New risks, new challenges, new responds, “no return” points: the EU (2)

- (High) *flexibility* by:
  - Diminishing barriers for gas flows: CMP rules (UIOLI, SoP), interconnectors, reverse flows, spot trade, demand for softening LTGEC provisions (TOP, hub-based pricing, etc.), ..., new market organization => Third EU Energy Package
- Third EU Energy Package (03.09.2009 => 03.03.2011):
  - Set of legal instruments providing *multiple supplies* & *flexibility* within EU (28) & Energy Community Treaty (28+9) area based on new principles of internal market organization
  - from a chain of 3 consecutive LTCs (1968-2009) – to Entry-Exit zones with Virtual Trading Points (hubs) (2009-onwards)
  - New architecture of EU gas market under development/in the making => Gas Target Model + 12 Framework Guidelines + 12 Network Codes + ...
- => **“No return” point has been passed by EU as a whole !!!**
- **BUT:** economic realities (& their technical background) in NWE & CEE differ significantly => not possible to provide synchronous development of market zones, to implement legally binding EU decisions on diversification (“3+ sources” rule - Reg.994/2010) which is an objective basis for competition => infrastructure density issue...

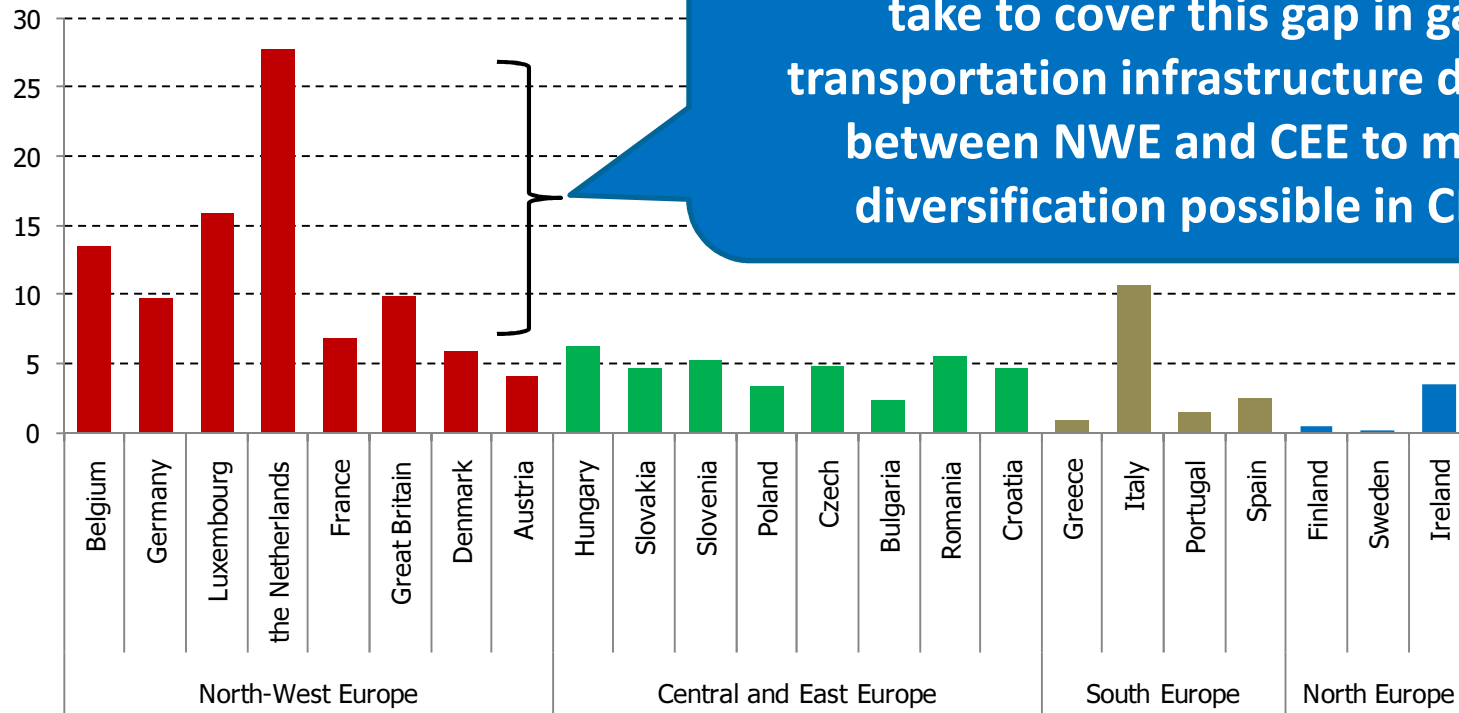

# Table of contents

- 1) New post-2009 gas world & its material & perceived realities in Broader Energy Europe
- 2) EU's respond to new realities: diversification (importer's angle)
  - a. **NWE vs CEE: two different EUs in preparedness for diversification (density of infrastructure)**

# Comparative liquidity of EU gas hubs (churn rates)

## EU gas hubs:

NBP (UK) & TTF (Netherlands)	10-15/20
Zee (Belgium)	5
Other hubs (Continental Europe)	3 & less

## For comparison:

USA (crude oil): NYMEX (WTI) (Feb.2010)	1680-2240
UK (crude oil): ICE (Brent) (Feb.2010)	2014
USA (gas): NYMEX Henry Hub (av.2009)	377

## Benchmark churn level for liquid hubs/marketplaces:

- acc. to business views **15**
- in 1<sup>st</sup> EU Gas Target Model **8**

***But if to measure not by churn only...***

**To introduce EU hubs as more liquid than they are in reality (as assessed by market participants)?**

# EU Gas Target Model & its key parameters: HHI (market concentration index)

## Remaining barriers inhibit new entry in retail markets

One can't expect many physical players in the market (low HHI) when gas infrastructure is in deficit => to invest in infrastructure development => adequate investment rules needed

Only Germany with competitive retail and supply market structure

UK exhibits lowest supply side HHI

\* Source: Frontier bas EC country fiches (2011)

Measure	CEER criteria
Size of Entry-Exit zones	≥ 20 BCM (215 TWh)
Pluralism of sources of supply	≥ 3 significant sources
Market concentration	HHI < 2000
Liquidity of the market	Churn rates > 8

# New risks, new challenges, new responds, “no return” points: Ukraine (1)

- **UA: Euro-integration** vs. **CIS-integration** => this “no return” point was passed in 2004 => Euro-integration choice de facto in place *in energy sector* since then =>
- Since Spring'2004 => UA demand to unbundle supply & transit contracts & to move to “European formulas” in RUS-UA gas trade:
  - UA expectations: to receive higher transit rates
  - UA reality: has received higher import prices
- Since 2006/2009: UA disagreement on import pricing formula & price level resulted from the move to “European formulas”=> transit crises Jan'2006 & Jan'2009 resulted, inter alia, from disagreements with “European formulas” in supply contracts
- UA perception of further RUS supply risks => search for multiple supplies => ***to escape monopoly of Russia as one single supplier*** =>

## New risks, new challenges, new responds, “no return” points: Ukraine (2)

- UA economic & legal motivation to diminish dependence on RUS gas supplies:
  - **Economic:** High import price & RUS/Gazprom unwillingness to soften pricing policy (no price review results achieved yet – though price concessions) stipulated UA search for:
    - **alternatives to RUS gas (supply side):** domestic production – onshore & offshore, shale gas, LNG import, reverse flows & UGS, and
    - **to deviate from (RUS) gas (demand side):** switch gas to coal, nuclear, energy saving & improving efficiency
  - **Legal:** Euro-integration policy, membership in Energy Community Treaty => implementation of EU energy acquis (Second => Third EU Energy Package) in UA => **legal obligations** for alternative supplies, interconnectors, reverse flows, unbundling Naftogas Ukraine, MTPA => **BUT: new & incremental risks for transit via Ukraine (both for RF & EU)**
- **“No return” point is reached? “Yes” – in policy, “No” – in results, but** – is it just a matter of time since trend “away from Russian gas” is not to be changed in UA?

# Russia-Ukraine gas problems reflects, inter alia, “domino effects” of Ukraine’s transition to new/EU institutional gas market structure

# Table of contents

  - a. Adaptation within new EU gas market architecture (new flexibility)
  - b. Diversity of pipelines routes
  - c. New pipelines by-passing UA vs modernization of UA GTS: comparative economics in project financing world

## Why it is NOT justifiable (from economic & legal standpoint) to import NWE spot prices into RF-UA gas supply contract

- **EU/UA view:** to take as a basis for UA import gas RUS price a NWE spot price index which reflects competitive character of the NWE market where:
  - Multiple supplies/suppliers
  - Contractual/physical oversupply (excessive spot gas, inter alia, is mostly RUS/Gazprom TOP gas)
- **BUT =>** UA (yet): non-competitive market, no alternative to RUS gas;
- => Until there is no alternative to RUS gas RF/Gazprom has a legal right to obtain maximum marketable resource rent via diff. mechanisms, incl. oil indexation (*European formulas*)
  - International legal protection: UN GA Res.1803 (1962), ECT Art.18 (1994/98) – on sovereignty on natural/energy resources
- **BUT =>** RF/Gazprom long providing multiple unilateral discounts to UA to soften its transition to *European formulas*
- **AND:** the higher the import price, more stimuli for importer to substitute/deviate from... (oil market case 1970/80-ies)

# Russia-Ukraine gas supply contract: contractual & factual payments vs. non-payments & subsidies

“European formula”-based market price (net-back replacement value, petroleum-product indexation)

# Structure of Russian gas price to Ukraine 2014

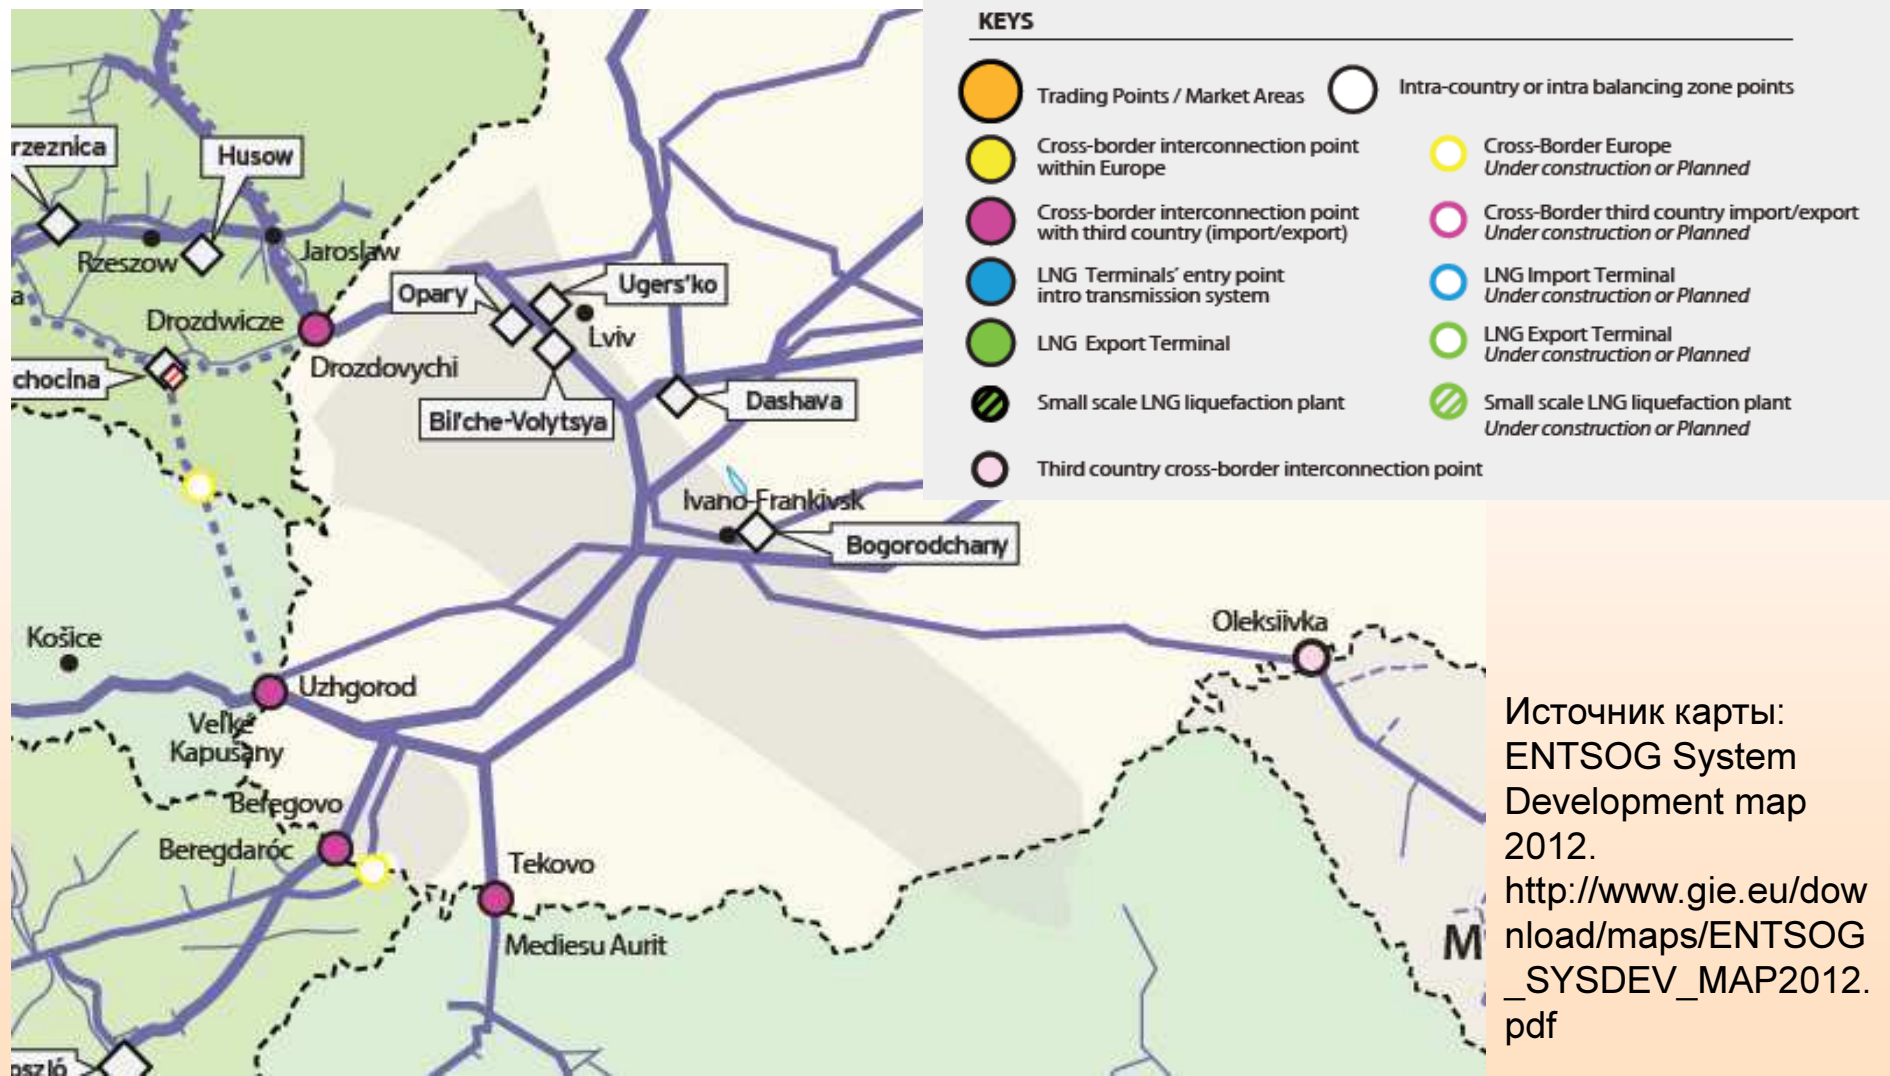

# Table of contents

# Ukraine: cross-border points where it obliged to possess physical reverse flow capacity due to its membership in Energy Community

Источник карты:  
 ENTSOG System Development map 2012.  
[http://www.gie.eu/download/maps/ENTSOG\\_SYSDEV\\_MAP2012.pdf](http://www.gie.eu/download/maps/ENTSOG_SYSDEV_MAP2012.pdf)

# UA reverse gas flows: conflict of public & contractual law, not a technical issue

- RF-UA Contractual law obligations (since Jan'1, 2009):
  - TOP mutual obligations (52BCM => 80%TOP => 41.6 BCM)
- UA Public law obligations (since Dec'3, 2013):
  - UA joined Energy Community Treaty since Feb'1, 2011 => obligation to apply EU energy acquis within UA (since 2015), incl. Regulation 994/2010 (inter alia, Art. 6.5 on reverse flows – “03.12.2013 at latest”)
- Conflict between two legal obligations for UA with different enforcement dates = direct economic losses for producer/gas resource owner (RF):
  - Reverse flows (from West) to substitute contract flows (from East); while both flows are de facto of the same (Russian) origin
  - Lower UA off-takes (13.9 BCM in 2013) prevent pay-back of earlier Gazprom CAPEX in advanced upstream developments aimed at guaranteeing fulfillment of its contractual supply obligations to UA
- The earlier obligation prevails (Pacta sunt servanda)

# Table of contents

  - b. Diversity of pipelines routes
  - c. New pipelines by-passing UA vs modernization of UA GTS: comparative economics in project financing world

# Preconditions for new Russian gas supply model to Europe

- 1) **Diversification of routes/means of supplies: from former GOSPLAN's "no more than one pipe to each market" to current "no less than two pipes/means of supply to each market":**
  - a. Change of the concept of risk assessment/minimization: from central planning & direct control on each export route through to delivery point – to competitive choice among few routes/means of supply (taking into consideration comparative costs & risks)
  - b. Economic justification of new pipelines/means of supply to mature markets: not new gas, but liquidation of transit monopoly
- 2) **Changing contracting structures & pricing mechanisms – operation within new EU gas market architecture:**
  - a. From the **chain of three consequential LTC** with (first bundled, then unbundled, but to be mutually correlated) supply and transportation contracts - to the system of **"entry-exit" market zones** with VTP (hubs) within unbundled commodity and capacity markets
  - b. Unbundled **capacity** market: supplier as a shipper only, capacity allocation – mostly by auctions, in rare cases - OSP
  - c. Unbundled **commodity** market: mature & oversupplied (either contractually or physically) market, "gas-to-gas" competition, two market segments – contractual & spot – in competitive coexistence

# Table of contents

# New model for EU: Evolution of gas value chain & pricing mechanism of Russian gas to EU (1)

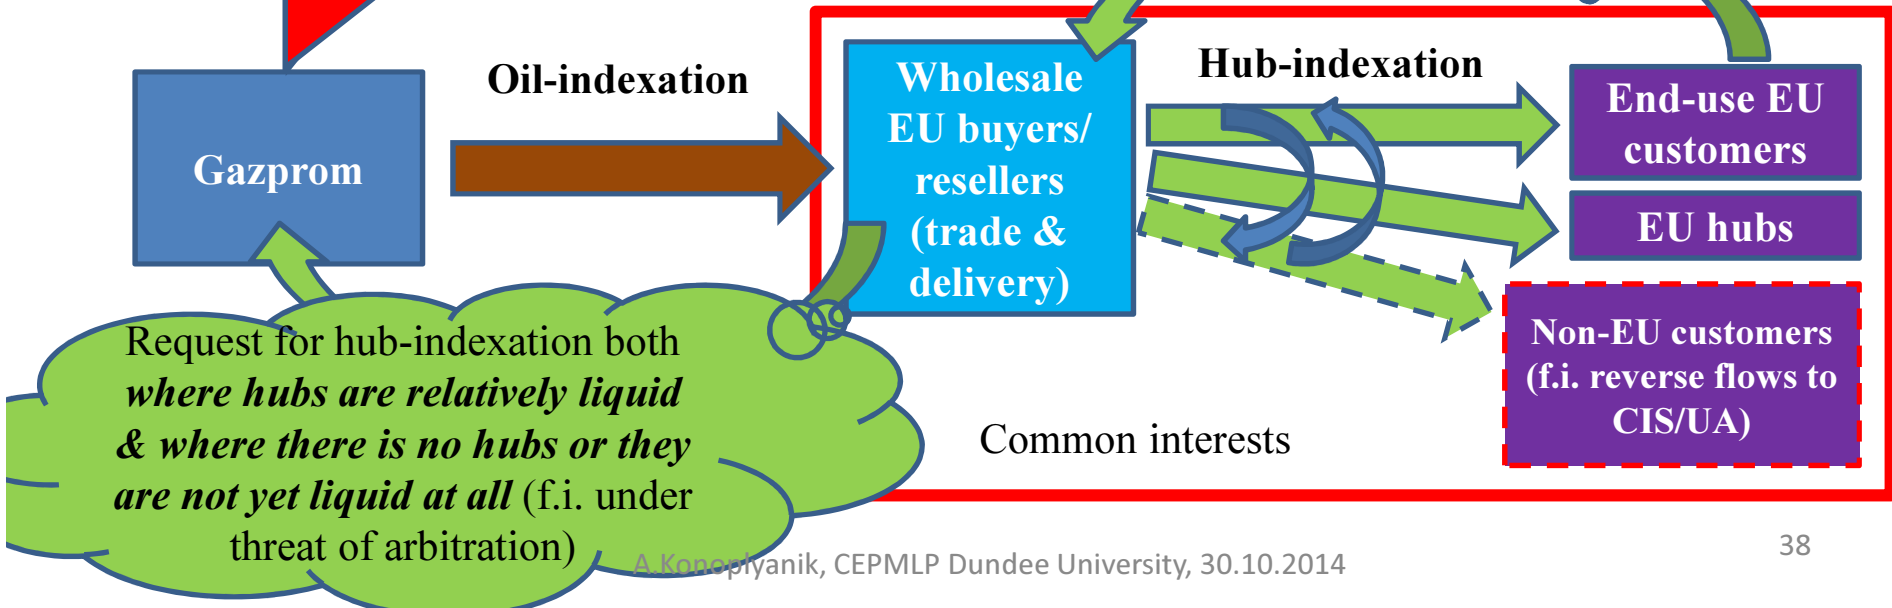

Past (Pre-2009) – growing EU market

Nowadays (Post-2009) – oversupplied (in NWE segment -?) EU market with not yet clear future trends

**Gazprom as price-taker from OIL market**

Request for hub-indexation *where hubs are relatively liquid*

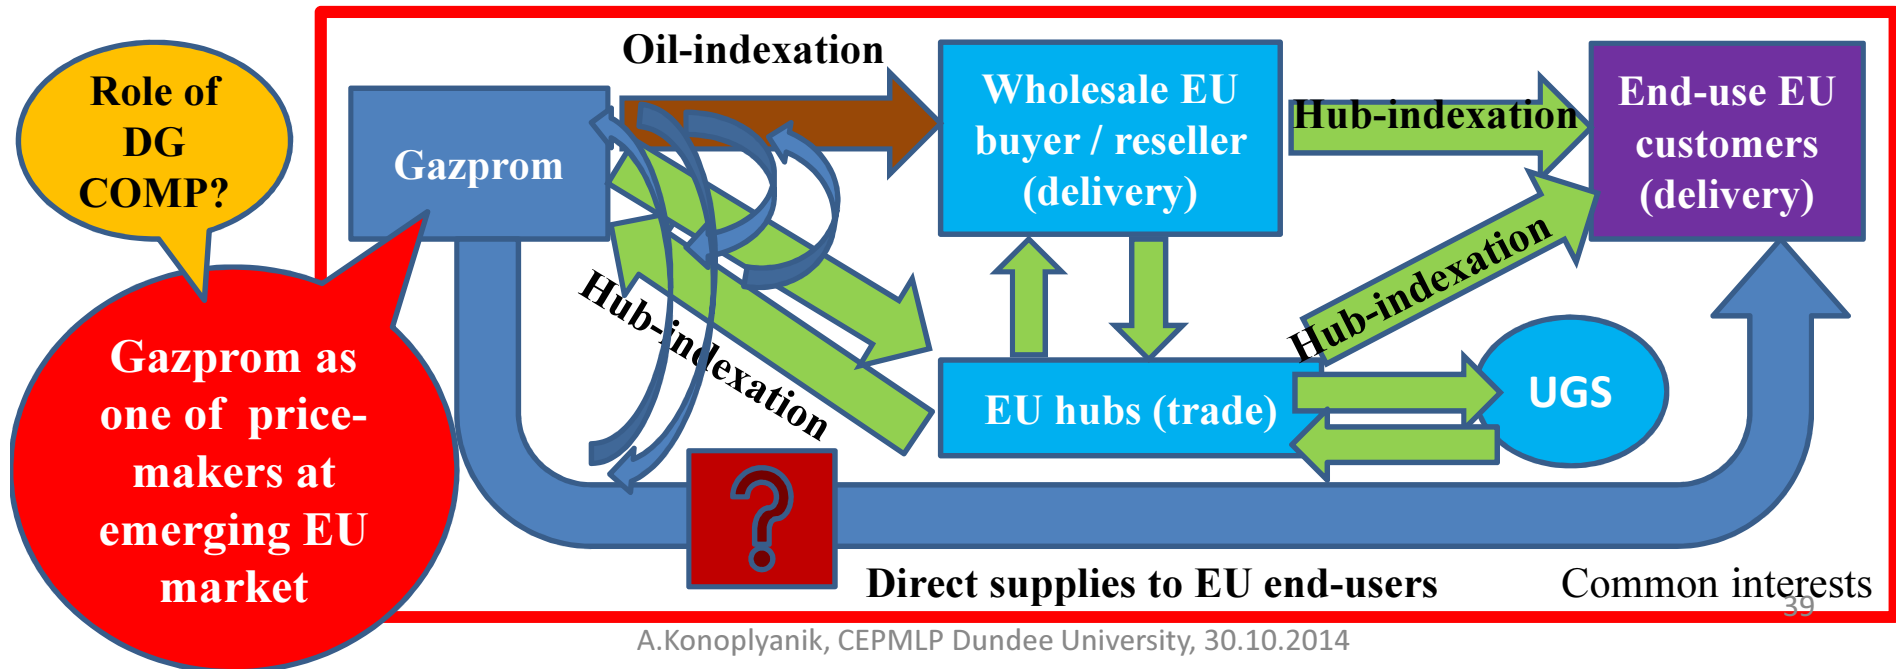

# New model for EU: Evolution of gas value chain & pricing mechanism of Russian gas to EU (2)

Future (“NO GO” contractual scheme under any (?) supply-demand scenario)

**Gazprom as price-taker from GAS BUYER’S market (with no participation on it)? => NO GO**

Future (what competitive niche for oil-indexed LTC & spot deliveries & trade to/within EU?)

## Contracted volumes of Russian gas supplies to Europe

Source (primary chart): ERI RAS (T.Mitrova), reproduced in & taken from «The Russian Gas Matrix: How Markets Are Driving Change», Ed. by J.Henderson & S.Pirani, Oxford University Press, 2014, Fig.3.1/p.53.

# Table of contents

- 1) New post-2009 gas world & its material & perceived realities in Broader Energy Europe
- 2) EU's respond to new realities: diversification (importer's angle)
  - a. NWE vs CEE: two different EUs in preparedness for diversification (density of infrastructure)
  - b. From Groningen model LTGEC to Third EU Energy Package in gas (new institutional structure of supplies)
  - c. Hubs development in the EU & in the world (how liquid are EU hubs)
  - d. EU Gas Target Model: "pluralism of supplies" requires financeable rules for investments
- 3) Ukraine's respond to new realities: diversification (transit state angle)
  - a. Russia-Ukraine supply contract: price & payment issue
  - b. Reverse flows issue
- 4) Russia's respond to new realities: diversification (exporter's angle)
  - a. Adaptation within new EU gas market architecture (new flexibility)
  - b. Diversity of pipelines routes**
  - c. New pipelines by-passing UA vs modernization of UA GTS: comparative economics in project financing world

# New risks, new challenges, new responds, “no return” points: Russia (1)

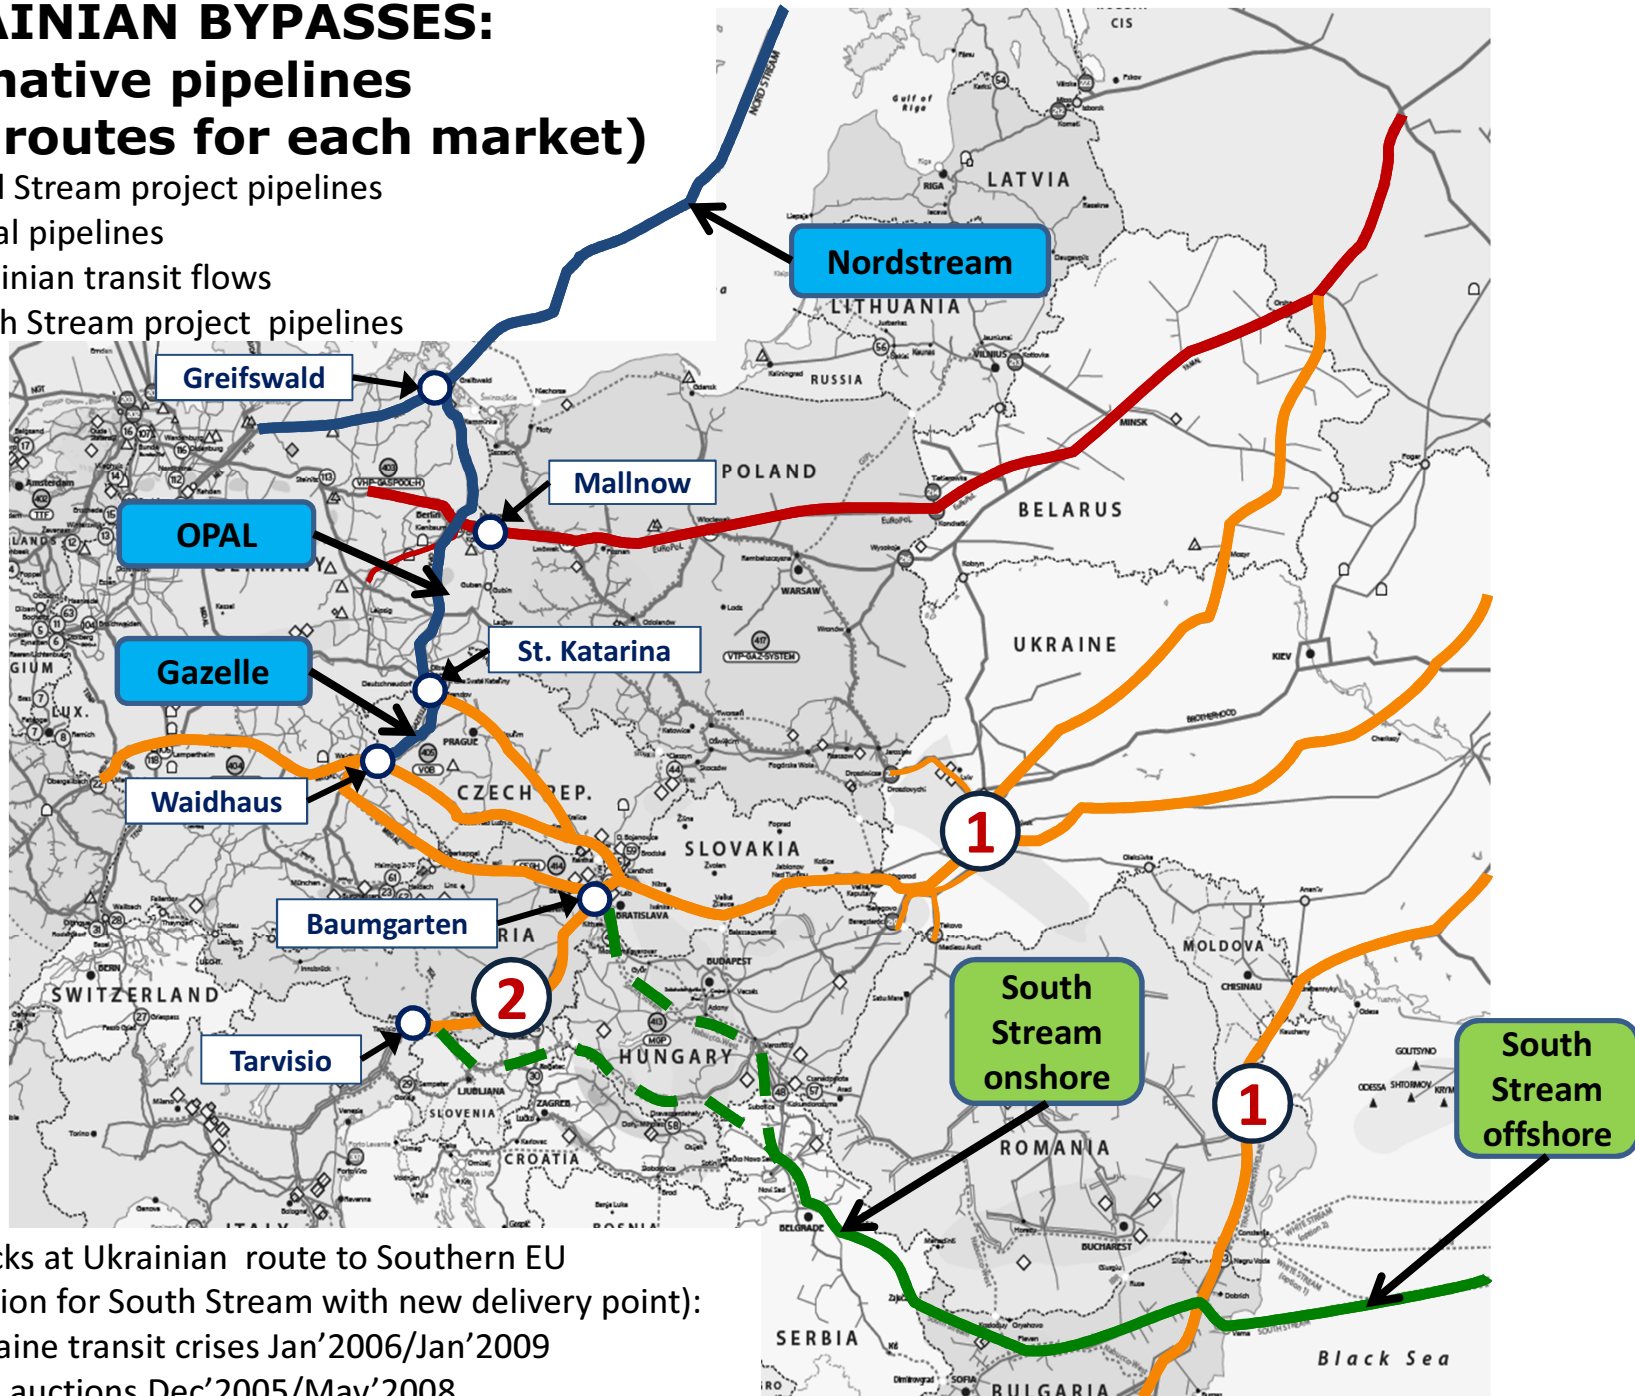

- Supply risks:
  - non-fulfillment of contractual obligations by UA (lower offtakes) = inter alia, negative upstream investment consequences for Russia
- Transit risks (within UA territory, post-2006/2009) – both materialized & perceived risks,
  - **Materialized:** not sanctioned off-take of gas in transit (at least 2 episodes – Jan’2006 & Jan’2009) => but:
    - it is RUS supplier who is fully responsible for gas delivery to EU delivery point (non-dependent e.g. transit problems) =>
    - risk of legal claims of EU customer against RUS supplier in case of non-delivery (supply contract) even if violation of transit contract =>
    - EU customers have not raised such claims in Jan’2006 / Jan’2009 cases, but what about the future if repeated?
  - **Perceived:** to materialize in near future – result of UA accession to Energy Community Treaty & adaptation to EU internal market rules:
    - MTPA vs transit flows (risk of contractual mismatch)
    - Forthcoming unbundling of Naftogas UA => risk of factual unilateral change (disappearance) of one Contracting Party to 10Y-long transit contract
    - Totally new proposed transit structure (UA-EU-US consortium), etc.

# New risks, new challenges, new responds, “no return” points: Russia (2)

- Change of the whole transit economics for supplier if precedent-based “risk” element included => responds:
  - **to escape monopoly of Ukraine as one dominant transit route** => to create *alternative & non-transit* routes => their economics compared to existing *transit* routes improved by increasing value of transit risks (see next chapter) =>
- Dilemma:
  - **Two routes (incl. transit) to each major markets (“least radical” scenario):**
    - (a) UA GTS + [Nord Stream/OPAL/Gazelle] => to North-West Europe,
    - (b) UA GTS + [South Stream (offshore + onshore)] => to Southern Europe,
    - Supply volumes to be distributed within each pair of routes, or
  - **One direct new (non transit) route to each major market (“most radical” scenario):**
    - (a) Nord Stream/OPAL/Gazelle => to North-West Europe,
    - (b) South Stream (offshore + onshore) => to Southern Europe
    - All transit volumes switched to new routes? => UA GTS dried up?
- **Different “no return” points under different scenarios: some are passed, other – not yet => no clear final picture yet...**

# UKRAINIAN BYPASSES: alternative pipelines (two routes for each market)

- Nord Stream project pipelines
- Yamal pipelines
- Ukrainian transit flows
- South Stream project pipelines

Bottlenecks at Ukrainian route to Southern EU  
(justification for South Stream with new delivery point):

- ① Ukraine transit crises Jan'2006/Jan'2009
- ② TAG auctions Dec'2005/May'2008

# Table of contents

- 1) New post-2009 gas world & its material & perceived realities in Broader Energy Europe
- 2) EU's respond to new realities: diversification (importer's angle)
  - a. NWE vs CEE: two different EUs in preparedness for diversification (density of infrastructure)
  - b. From Groningen model LTGEC to Third EU Energy Package in gas (new institutional structure of supplies)
  - c. Hubs development in the EU & in the world (how liquid are EU hubs)

  - a. Russia-Ukraine supply contract: price & payment issue
  - b. Reverse flows issue
- 4) Russia's respond to new realities: diversification (exporter's angle)
  - a. Adaptation within new EU gas market architecture (new flexibility)
  - b. Diversity of pipelines routes
  - c. New pipelines by-passing UA vs modernization of UA GTS: comparative economics in project financing world**

# In project financing world both technical & financing costs does matter...

**I** "Natural advantage" of project A over project B ( $A < B$ )

**II** Final competitive *dis*advantage of project A over project B ( $A > B$ )

$$\text{Financing costs (LIBOR+)} = f [R(\text{country}) \times R(\text{company}) \times R(\text{project})]$$

# Russia & Ukraine at the scale of major international rating agencies (long-term investment credit ratings in foreign currency)

# Russia & Ukraine: evolution of long-term credit ratings

(A) In foreign currency

(B) In local currency

Compiled by M.Larionova, Russian Gubkin State Oil & Gas University, Chair "International Oil & Gas Business", Masters programme 2013-2015, based on credit rating agency's data.

# 1-year LIBOR, 2008-2014: – going down, but...

Compiled by M.Larionova, Russian Gubkin State Oil & Gas University, Chair "International Oil & Gas Business", Masters programme 2013-2015.

# LIBOR+ for OECD states (23.05.2014) vs Russia & Ukraine long term credit ratings in foreign currency

Calculated by M.Larionova, Russian Gubkin State Oil & Gas University, Chair “International Oil & Gas Business”, Masters programme 2013-2015, based on credit rating agency’s data.

# NJSC Naftogaz of Ukraine: evolution of long-term credit rating

Calculated by M.Larionova, Russian Gubkin State Oil & Gas University, Chair "International Oil & Gas Business", Masters programme 2013-2015, based on credit rating agency's data.

A.Konoplyanik, CEPMLP Dundee University, 30.10.2014

## Ukraine: “transit interruption probability” index (2009–2014)

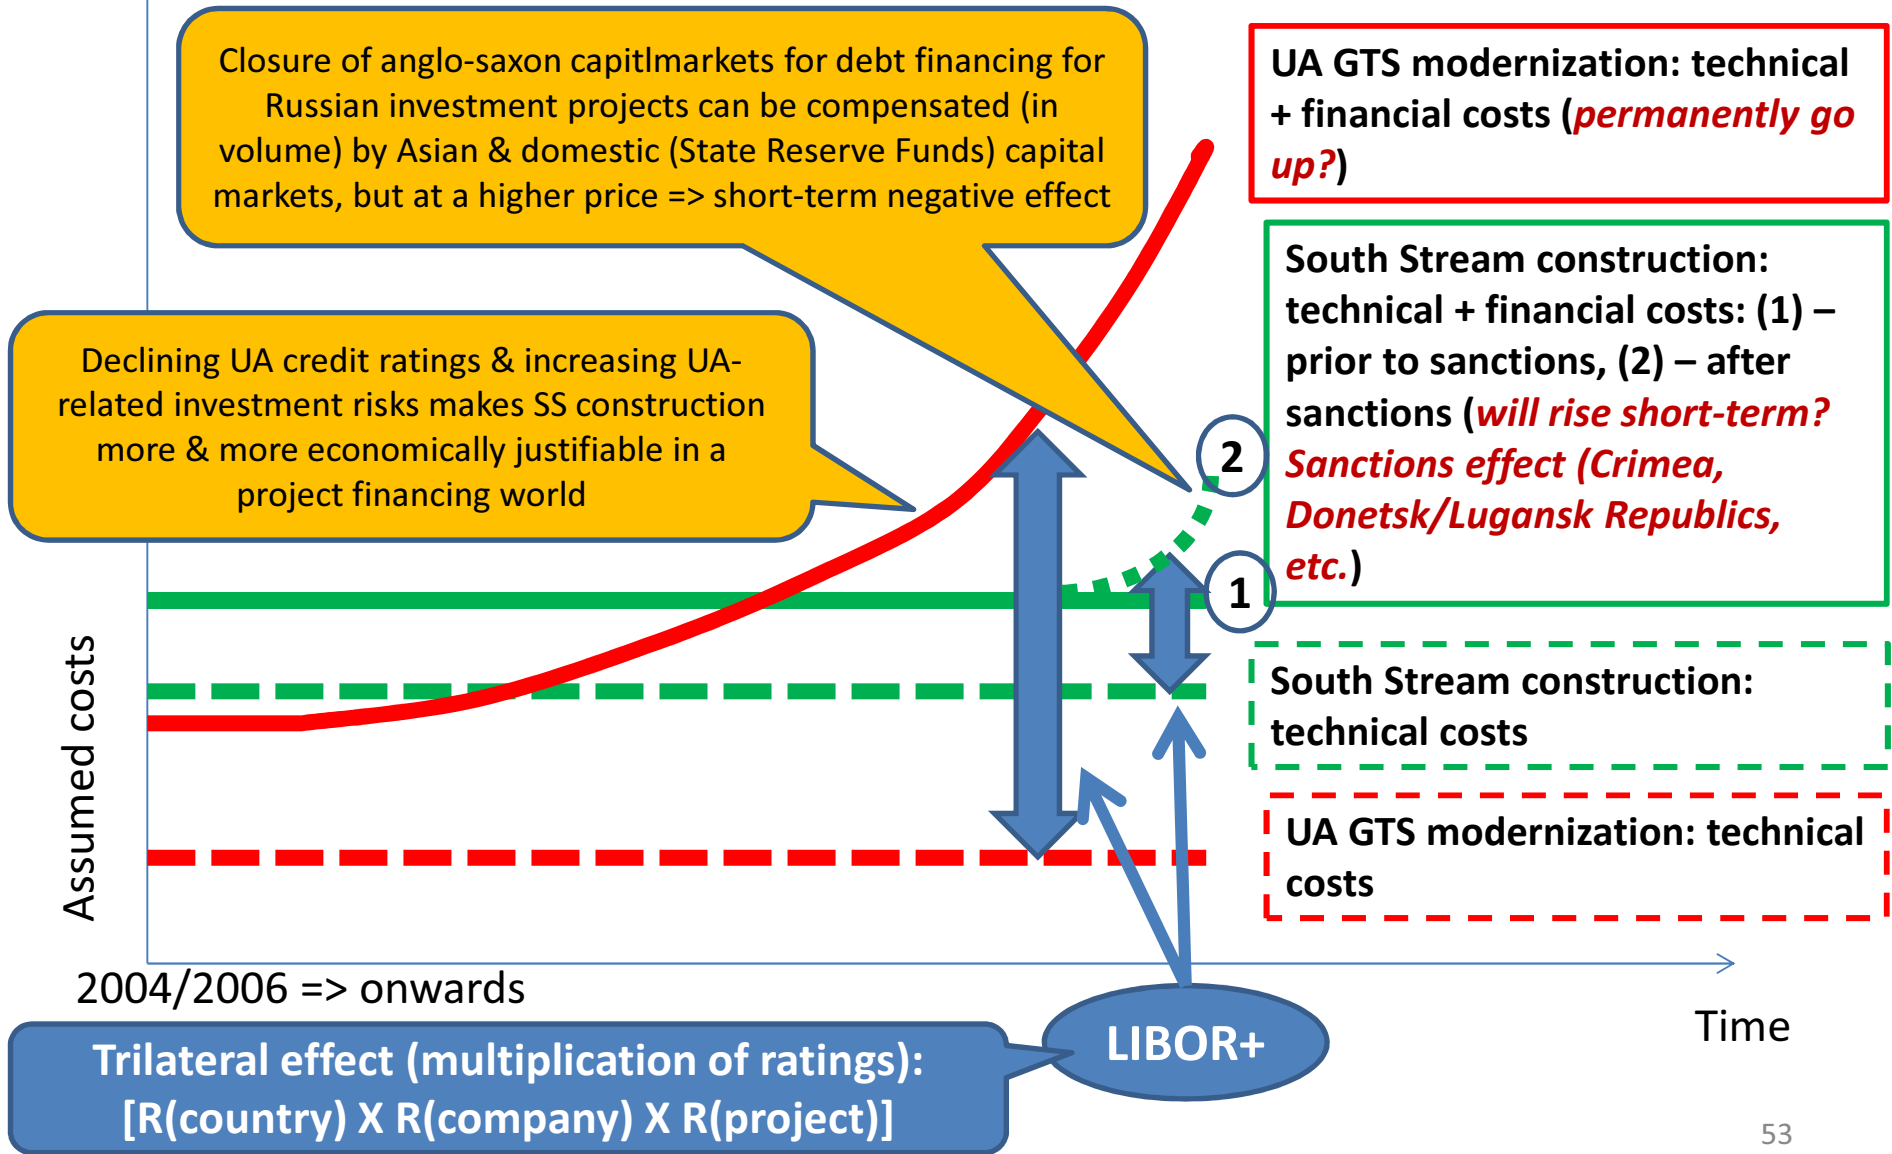

To evaluate possible interruptions of transit supplies we consider 1009 newsbreaks, related to gas relations between Russia and Ukraine through 30.12.2008 to 10.10.2014 period. These newsbreaks were taken from the newswire <http://newsukraine.com.ua/> (prior to 28.02.2014) & <http://km.ru/> (after 28.02.2014). Then they were filtered to 170 newsbreaks which, in case of their realization, would have a main effect on interruption of gas flows in transit within the Ukrainian territory.

Calculated by M.Larionova, Russian Gubkin State Oil & Gas University, Chair “International Oil & Gas Business”, Master’s programme 2013-2015, based on the methodology jointly developed with the author

A.Konoplyanik, CEPMLP Dundee University, 30.10.2014

# 'South Stream' construction vs UA GTS modernization: illustrative example of 'project financing' cost comparison, if incl. comparative risks & credit ratings within time frame (*prior to and after US, EU, etc. sanctions on Russia*)

# Thank you for your attention!
